

Ohio Brass Announces the Availability of a

Flipper Kit.

The Ohio Brass Flipper Kit

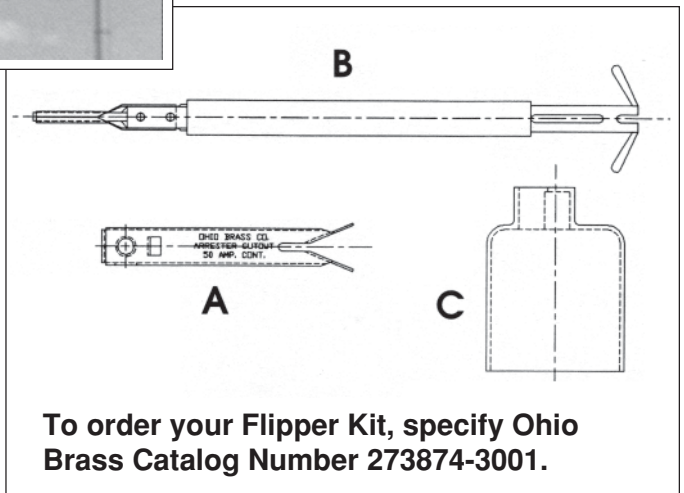

is designed to offer dependable, low-cost overcurrent protection for all types of rural distribution transformers.

It allows the arrester, with ground lead disconnect to be mounted on the transformer tank in the most efficient location to provide lightning protection.

The Flipper Kit includes:

A The horizontal fork for attaching to the top terminal of the distribution arrester.

B The spring arm which has an insulated sleeve covering the non-contact area, which attaches to the top terminal of the transformer bushing with the smooth end fitting into the bushing terminal.

To order your Flipper Kit, specify Ohio Brass Catalog Number 273874-3001.

C The Protective Cap or animal guard for the transformer bushing.

All that is needed to complete this low cost overcurrent protection method is the fuse link of your choice.
