centralmoloneyinc.com

AVAILABLE NOW

Central Moloney Inc. responded to an unexpected industry need for a new size **Arrestor Bracket Cap (A.B. Cap) Wildlife Guard**, used to shroud exposed arrestor mounting brackets. Some Arrestor manufacturers have developed narrower versions and those affected in the industry quickly realized the standard size A.B. Cap no longer fit securely on the bracket to shroud the exposed area, due to the narrower bracket width.

- New smaller design is engineered to be compatible with the new Hubbell arrestor bracket and Balestro arrestor bracket.
- Aids in reducing outages caused by wildlife perched on transformer-mounted polymer style arrestor mounting brackets.
- Cost-efficient means of insulating wildlife from ground potential at the mounting of the polymer arrestor bracket to the metal transformer mounting bracket.
- Easy snap fit installation. No tape or wraps required!
- Rounded surface also serves as a perch deterrent.
