

Bonded Sealing Washers

SEELOC® Air and Water-Tight Self-Sealing Washers

SEELOC® Washers are self-sealing, vibration-resistant washers, each having a silicone rubber section, molded and bonded to a stainless steel formed washer. These washers are designed for use with regular screws, bolts, or studs for sealing panels and enclosures having standard as well as large clearance holes or adjustment slots, and can also be used to seal openings of protrusions. Upon tightening, a seal is formed under the head of the fastener as well as around the periphery of the washer face.

Fender Washers

Stainless Steel Fender Washers

Also known as Plaster washers these special sized washers have an extra-wide bearing size for screw heads to eliminate the need for patching holes. This also permits the using of smaller size screws than might otherwise be needed.

Lock Washers

Stainless Steel Medium Split Lock Washers

Also known as spring lock washers, these split lock washers provide a positive locking action. Spring like take-up compensates for loosening caused by slight material wear.

Stainless Steel High Collar Lock Washers

These washers are specially designed for use with socket head cap screws and where there are space limitations. The smaller outer diameter accommodates confined areas, while the increased thickness sustains the washer's overall locking effectiveness.

Stainless Steel Toothed Lock Washers

Use external tooth lock washers when you need maximum holding power in a washer. Team them up with fasteners having heads large enough to make contact with the washer teeth. Examples include: round head, pan head and binding head.

Bonded Sealing Washers

Stainless Steel Bonded Sealing Washers

Sealing washers help seal joints, prevent leakage and cushion under the head of the bolt or nut. Rubber is bonded to a washer to form a washer that is strong, yet soft and resilient enough to use with fragile materials.
