

GENERAC®

**Exclusive Generac
Composite GENPAD™**

More power. More protection.

Generac's proprietary lightweight high-strength composite GENPAD™ revolutionizes HSB Generator installs. Weighing only 33lbs, the composite pad is 82% lighter and gains a 20% greater load capacity than the 3" concrete GENPAD™, creating a hassle-free pad installation and handling experience. It fits all Air-Cooled Generac 10-26kW automatic standby generators, plus Honeywell, and the limited warranty is active for the full length of the Generator warranty coverage. Available in both the US and Canada.

Features & Benefits:

Strong & Lightweight

Easy to maneuver by one person and an increased load capacity compared to the 3" concrete GENPAD™.

Easy to Transport

Nesting design for easy stacking and stability during transit. Also resistant to cracking, chipping or breakage reducing waste and returns.

Durable Design

Industrial high strength, fiberglass reinforced, thermoset sheet molding compound that is UV resistant and flammability rated.

Natural Look

Textured top surface and concrete gray color.

Installation Made Easy

Mounting bolt score marks for quick unit alignment, and less installation time compared to pea gravel, poured in place concrete and concrete pads.

Pad Comparison
